I understand the value of the system and recognize that it has been a useful investigative tool for our department. In fact, I have the strongest advocates for Flock within our city administration since we first implemented it approximately four years ago. I personally worked to gain support for the system because I believed in its potential and the benefits it could provide to our agency and community.

However, I have reached a point where the continual upselling have become difficult to justify. I fully understand that your company is in business to generate revenue, and I respect that reality. At the same time, it has become increasingly frustrating that after the initial agreements are signed, the focus appears to shift away from customer support and product completion and more toward additional revenue opportunities.

One of the most concerning issues is the expectation that we pay approximately 40% more simply to retain access to our own data beyond 30 days. From our perspective, that pricing structure is unreasonable. Our city is not going to approve an additional \$15,000 solely for extended access to data that has already been collected through a system we currently fund. The data is required by Arkansas law for us to be compliant with the Arkansas Code Annotated 12-12-1801 through 12-12-1808.

As a result, we will need to pursue alternative methods for managing and preserving the information we require. At this point, our plan will be to download and archive what we can on a monthly basis. Additionally, we have already begun evaluating other available alternatives moving forward.

When I first introduced Flock to our city, I was genuinely excited about the partnership and the possibilities it offered. Unfortunately, the overall experience has changed significantly, and dealing with these recurring issues has become increasingly discouraging.

Cpt,

Maybe as a concession I can get 15% off just because of all this frustration. Flock has been such a useful tool for almost all agencies. It's been a frustrating install process for sure! And we want it to help solve some major crimes for the city.

Holy Cow!

I appreciate your quick response. The number of headaches caused by these things is making it no worth keeping. Just for the analytics to access the data for our cameras is 40% of the cost of the entire Flock setup.

I think we will be reconsidering keeping these. They are not solving enough crime to justify \$53,000 a year. Especially after it took 3.5 years to get them install and I still don't have the correct Condor PTZ camera up.

I will discuss this with the Chief but I don't know we can justify it.

Captain,

The cost for traffic analytics is 15k per year. Probably something to approach public works and streets as they can benefit those departments. They can gain long term data knowledge because the cameras are always there instead of 2 week surveys etc.

Thank you. I didn't realize that we didn't have access to the required data without paying more for additional access.

Good Afternoon Captain,

I hope you have been well. Let me loop in [REDACTED] who will be able to assist.

Thank you, sir!

Garrett

I just discovered that to comply with Arkansas law and be able to extract the data, such as plate reads past 30 days, we need access to Traffic Analytics. How do we get access to it and how much is that going to cost us? I am needing to compile data now that have all of our cameras in place.
