City of Sherwood Live Feed 11694401 - Sherwood Police Department Statement Regarding the Flock Camera System

Jurisdiction	Sherwood, Arkansas
Publisher	City of Sherwood
Published	March 11, 2026
Source URL	https://www.sherwoodar.gov/live_feeds/11694401
Received / verified	August 8, 2026
Classification	Primary agency public statement / public transparency record
Handling	Public; no sensitive data observed

Record status

Verified as a statement published on the official City of Sherwood website and observed live on August 8, 2026. This record documents the City's public representations; it does not independently prove the underlying facts, legal conclusions, policy compliance, payment history, or causal role of Flock technology in any arrest.

Material statements preserved

- Sherwood entered into a Flock contract in October 2022; the first camera was installed in January 2023 and the last on March 9, 2026.
- Before installation of the last camera, the City said no payment had been made to Flock and described the prior operation as a trial basis.
- The City said officers received verbal instruction and hands-on training when the system went live, with continued training as cameras were installed.
- On March 11, 2026, the department said it was reviewing and finalizing a formal written policy and that payment would begin after completion of installation.
- The page describes both real-time hot-list alerts and historical searches by authorized data-sharing agencies across participating jurisdictions.
- The page says Flock was not used for traffic enforcement and that a traffic stop could not be initiated solely from Flock camera data.
- The City referenced a recent officer incident, additional training, and no known earlier Sherwood traffic stops based solely on Flock information.
- The City attributed assistance in 23 arrests to the system, including kidnapping, hit-and-run, and drug cases.

Precision and limitations

- The no-payment statement is narrower than no invoice, no debt, or no contractual obligation. Quote the City's wording exactly.
- The page does not identify the referenced recent incident or officer. The statement about earlier traffic stops is expressly qualified as no known instances.
- The page supplies no case list, denominator, attribution method, or definition of assisted for the 23-arrest assertion.
- The phrase over the course of the last 3.5 years is the City's wording. January 2023 through March 11, 2026 is approximately three years and two months.
- The uploaded saved-page components omit the top-level page HTML. Separate screenshot, DOM, and text captures preserve the live page as observed August 8, 2026.

Preservation method

The user-supplied component files were preserved under their received filenames and hashed individually. Because that component set did not contain the top-level page HTML, ARAP separately captured the live page on August 8, 2026 as an unannotated screenshot, a rendered-DOM snapshot, and a rendered visible-text extraction. The complete SHA-256 inventory is recorded in the package manifest.

What this record does not establish

H-064 does not by itself establish whether the City's contract interpretation was correct; whether an invoice had been issued; whether every search, alert, stop, or sharing event complied with law and policy; whether the referenced officer incident occurred exactly as summarized; or whether Flock technology was necessary or sufficient for any of the reported arrests. Those questions require separate primary records.

City of Sherwood

The following is a statement from the Sherwood Police Department regarding the utilization of the Flock camera system.

The Sherwood Police Department uses the Flock camera system as an investigative tool to enhance public safety. These cameras capture vehicle information such as license plate numbers and vehicle characteristics (make, model, color, and other distinguishing features) that can assist officers when investigating crimes, locating stolen vehicles, or identifying vehicles connected to criminal activity.

The Sherwood Police Department entered into a contract for the Flock system in October 2022, and the first camera was installed in January 2023. The last camera was installed Monday, March 9, 2026. Up until the last camera was installed, no payment had been made to Flock, and they have been operating on a trial basis. When the system first went live in January 2023, officers received both verbal instruction of the process and procedures to follow and hands-on training on how to properly use the system. Training has continued as additional cameras were installed.

With the final camera installed this week, the department is currently reviewing and finalizing the formal written policy governing the system's use. The policy is being completed, and payment will now begin with the installation phase of the contract being fulfilled.

It is also important to clarify how the system functions. The Flock camera system has two primary uses. The first is real-time alerts. If a vehicle that has been entered into a hot list passes a Flock camera, the system generates a notification that is sent to the law enforcement agency that owns the camera so officers can take appropriate action. The second is historical search capability. If investigators need to review past activity during an investigation, authorized agencies that participate in data sharing can search the system to see when and where a specific vehicle or license plate was detected by Flock cameras within participating jurisdictions. The Flock camera system is not used for traffic enforcement. Even if a camera captures information about a vehicle that could indicate a traffic violation, officers cannot initiate a traffic stop based solely on Flock camera data.

Live-page visual capture - continued

An officer must personally witness a traffic violation in order to conduct a traffic stop.

The officer involved in a recent incident involving Flock cameras was newly released from training when the incident occurred and has since received additional training involving the use of the Flock camera system. Up until that time, there were no known instances of the Sherwood Police Department conducting a traffic stop based solely on Flock camera information.

The "traffic" label referenced on the public transparency dashboard does not mean traffic enforcement occurred. Search categories within the system can reflect a variety of investigative contexts, including situations where a vehicle may be associated with a crash investigation, a report involving a roadway incident, or other investigative circumstances involving vehicles.

Like any new technology, the implementation process includes a learning curve as officers become more familiar with the system and its capabilities. Additional training and continued review are part of ensuring the technology is used appropriately and in accordance with applicable laws and departmental standards.

Over the course of the last 3.5 years, this tool has been able to assist the Sherwood Police Department in 23 arrests for various crimes including kidnapping, hit and runs, and drugs. The Sherwood Police Department remains committed to using investigative technology responsibly while maintaining public awareness about how these tools are used to support community safety.
