Hey John;

That sounds like a solid plan. I'm off on Monday so I'm available all day. Just let me know what time you want to meet up, and we can knock that out before the class on Tuesday. I'll also have all the batteries charged up and ready to go this weekend. Our Part 91 COA-BVLOS is also attached as requested.

Let me know if you require further.

Hey Sgt,

I was planning out our week and was wondering if you're available Monday afternoon, the 31st? I get into town then and can come straight to your office. I think it would be best to unpair your drone with the station. We can pack the drone and the RC back into the case for transport to your training facility. Day one will cover basic ground school, focusing only on flying with the remote. That way, we can spend all day at your training location. Then we will bring it back for Wednesday

ARAP public derivative | 164-M | original PDF page 10 | identifiers / browser footer removed as applicable

and Thursday where the station is located. It will also allow me to check your software updates and perform a calibration before class. We will need 2-3 hours of "classroom" time on Wednesday, but we can do that wherever you prefer.

Please let me know if this is possible; I think it will make our week run much smoother without driving around. I'm due to arrive in Little Rock at 3:15. I don't know when your day ends but this would be ideal. Either way, we can make it work, more flying time for you and your team is always the goal.

If it's possible, please send me a copy of your BVLOS waiver so that I can review it.

Let me know; I don't want to inconvenience you. There are other options.

John

John;

Attached is the response to the "Class Instructions" indicating that we have everything required for the class. As discussed, we also have our new training room reserved for Sept 1-Sept 3 (all day). The location address is 9926 Landers Rd, Sherwood, AR.

Please let me know if you require further. Look forward to seeing you all soon!

Ok,
Let me reach out to Heath and see what we can figure out.

John
