Jacksonville ALPR Audit Evaluation

Prepared: August 12, 2026

Scope: Review of Jacksonville Police Department Policy 10-28, the June 14-July 14, 2026 Flock audit export, and the July 14, 2026 outside-agency participation page. Previously compiled Jacksonville statistical figures are noted only as context where the original statistical report is not part of this selected source set. This is not a finding about an individual user or legal compliance.

Executive conclusion

Jacksonville produced a detailed search-audit PDF that permits meaningful evaluation of query reasons, case-number visibility, users, search types, and network scope. It also produced a contemporaneous administrative page showing hundreds of outside organizations with configured access. These records document substantial system connectivity and active investigative use, but the written policy does not require a recurring audit or Arkansas's six-month public report.

The most important findings are:

1. The search-audit PDF contains **267 distinct search IDs** associated with **17 displayed user names or email identifiers**.
2. The audit contains 149 lookups, 101 searches, 10 mobile lookups, and 7 mobile searches.
3. A recognizable case number is visibly populated for **98 of 267 records**. The remaining 169 records have no visible value in the released Case # column. That does not establish that no case or CAD record exists elsewhere.
4. The median search scope is 22 networks; nine records show more than 5,000 networks and the maximum is 6,010. Network scope is not the same as actual result access.
5. The reason field is generally populated and includes identifiable investigative categories. Only two records are labeled Traffic Infraction in the released audit.
6. The July 14 outside-agency participation page lists **349 configured organizations** in the supplied 12-page capture. Search access is enabled for 343, hotlist access for 287, and both for 282.
7. Policy 10-28 requires visual plate verification and, when circumstances allow, dispatch or MDT status confirmation. It uses should rather than shall for recording alert dispositions and reasons for manual hotlist entries.
8. The policy contains no stated recurring audit schedule and no six-month public-report clause, even though Arkansas law requires six-month statistical compilation and eighteen-month preservation.

Documents evaluated

Record	Date / period	Role
Jacksonville Policy 10-28	Effective/reviewed November 11, 2024	Written LPR requirements
Jacksonville Flock audit PDF	Labeled June 14-July 14, 2026	User/search audit
Outside Agency Participation page	Captured July 14, 2026	Configured network relationships

Duplicate copies were not counted as separate evidence.

Search-audit findings

Population and search types

Metric	Observed value
Distinct search IDs	267
Displayed user identifiers	17
Lookup	149
Search	101
Lookup - Mobile	10
Search - Mobile	7

The file is a flattened 30-page PDF arranged in six-page column groups. ARAP matched the repeated column groups by record order and counted UUIDs in the ID section. Native CSV or XLSX data would be more reliable and accessible for independent review.

Case-number visibility

The released Case # section visibly contains 98 entries representing 15 normalized case-number strings, including apparent formatting variants such as 26-02586 and 26-2586. The remaining 169 record positions have no visible case number in that column.

This supports a narrow observation: the released audit does not itself link every search to a displayed case number. It does not prove that the other searches lacked dispatch, incident, CAD, intelligence, or administrative support. A compliance audit should reconcile each search to its supporting record or document the authorized exception.

Search scope

Network metric	Observed value
Median networks searched	22
Maximum networks searched	6,010
More than one network	256 of 267 (95.88%)
More than 1,000 networks	9 of 267 (3.37%)
More than 5,000 networks	9 of 267 (3.37%)

The distribution appears clustered: most searches use a comparatively limited network set, while nine use a nationwide-scale scope. The records do not state whether those broader searches required additional justification or review.

A high network count does not show that each network returned data, that every result was viewed, or that an outside image was downloaded or used. Those are separate audit events.

Reasons

The audit displays reasons such as larceny/theft, weapons offenses, motor-vehicle theft, stolen property, missing/endangered persons, threats/harassment, assault/battery, burglary, narcotics, terrorism-related threats, and traffic infractions.

The most frequently recognizable categories in the extracted reason section include:

Category text	Occurrences
Larceny/Theft Offenses	57
Weapons Offense (Guns/Shots Fired)	37
Motor Vehicle Theft/Stolen	34
Stolen Property Offenses	29
Missing/Endangered Person/Runaway	25
Threats/Harassment	18
Assault/Battery Offenses	16
Drugs/Narcotics	7
Burglary/Breaking & Entering	6
Terrorism/Terroristic Threats	5
Traffic Infraction	2

These are text-occurrence counts from the released PDF, not legal determinations or unique-case counts. Several search rows may belong to the same investigation.

Outside-agency participation

The 12-page administrative capture lists 349 configured organizations:

Setting	Organizations
Search access enabled	343
Hotlist access enabled	287
Both enabled	282

The page documents configuration status on July 14, 2026. It does not establish that every listed organization searched Jacksonville data, received a result, or used a Jacksonville image. Nor does it explain whether Access is inbound, outbound, reciprocal, or governed by a written agreement for each organization.

The record is nevertheless important because Policy 10-28 says outside dissemination should be recorded in a secondary dissemination log. The participation page should be reconciled with:

- written agreements or authorization records;
- settings history and approval dates;
- actual search and result-access logs;
- downloads and exports;
- temporary-access records; and
- secondary dissemination logs.

Policy assessment

Policy 10-28 includes useful safeguards:

- access restricted to official public-safety purposes;
- trained users;
- visual comparison of the observed plate with the alert;
- dispatch or MDT status verification when circumstances allow;

- approval for nontraditional deployments;
- a 150-day ordinary retention ceiling;
- both Arkansas destruction endpoints for data retained with an investigation;
- prohibition on sale, trade, or exchange; and
- an evidence-of-an-offense condition in the retention section for interagency sharing.

The principal textual gaps are:

1. **No six-month public-report clause.** The policy does not require compilation, public availability, or eighteen-month preservation of the statutory statistical report.
2. **No recurring audit.** The policy does not state a schedule, population, sample, reviewer, workpapers, exceptions, or corrective-action process.
3. **Advisory documentation language.** Users should record alert dispositions and manual-entry reasons; mandatory language would create a clearer auditable control.
4. **Historical searches.** Searches need only comply with other policy, ACIC rules, and state law; no contemporaneous reason, case/CAD number, scope, or expiration control is stated.
5. **Sharing language.** An earlier section permits sharing for legitimate law enforcement purposes, while the retention section states the narrower Arkansas evidence-of-an-offense condition. The policy should say which controls and how it is documented.
6. **Independent confirmation.** Dispatch/MDT verification is qualified by when circumstances allow, which leaves the exception undocumented.

Previously reported statistical context

The Jacksonville citizen packet previously summarized agency statistical reporting for January-June 2026 as 6,478,446 scans, 2,640 confirmed NCIC matches, and four arrests/prosecutions. The original statistical report was not included in the selected source set used for this evaluation, so those figures are not independently re-audited here and should not substitute for the source report.

What the records do and do not establish

Established

- Jacksonville produced a search-level Flock audit for the identified period.
- The file identifies 267 searches and 17 displayed users.
- Reasons are generally descriptive, but most rows do not display a case number.
- Nine searches show a scope exceeding 5,000 networks.
- Hundreds of organizations had configured search or hotlist access on July 14, 2026.

Not established

- That a blank case field means no supporting record exists.
- That every configured organization actually accessed Jacksonville data.
- That a broad query returned, displayed, downloaded, or disseminated any result.
- That the 267-row PDF is the complete population without an export manifest.
- That any identified user acted improperly.
- That statutory six-month reports were not created merely because the policy omits the requirement.

Focused follow-up records

1. The native CSV/XLSX version of the 267-row audit and its vendor export manifest.
2. Search-to-case/CAD reconciliation, including approved exceptions for rows without a displayed case number.
3. Supervisory review records for the nine searches exceeding 5,000 networks.
4. Actual result-source, view, download, export, and dissemination logs.
5. The secondary dissemination log required by Policy 10-28.
6. Agreements, approvals, and settings histories for outside-agency participation.

7. Every six-month public statistical report and its underlying native dataset for the statutory preservation period.
8. A revised policy adding mandatory audit, reporting, manual-hotlist, query-justification, and exception controls.

Bottom line

Jacksonville's released search audit is a meaningful transparency record, but it should be supplied in native form and paired with case reconciliation, result-access logs, and supervisory review. The policy should be updated to mandate the six-month public report, recurring audits, required search and manual-hotlist documentation, and a single unambiguous sharing standard.

Authority and source integrity

- Arkansas Act 668 of 2025, amending Arkansas Code §§ 12-12-1803 through 12-12-1805.
- Jacksonville Police Department, Policy 10-28, reviewed November 11, 2024.
- 6_14_2026-7_14_2026-Jacksonville AR PD-Audit.pdf.
- Devices - Jacksonville AR PD - Admin - Flock Safety - OUTSIDE AGENCY PARTICIPATION.pdf.
- Jacksonville Citizen Information Packet, prior statistical context only.

Selected source-file SHA-256 values are maintained in the accompanying evidence manifest.

This report is a records and governance analysis, not legal advice or a finding of misconduct.
