Little Rock ALPR Reports and Q2 Audit Evaluation

Prepared: August 12, 2026

Scope: Review of the supplied March-June 2026 RTCC reports, Q2 and semiannual reports, the January-June statutory ALPR report, the Q2 LPR audit, and LRPD General Order 325. This is a review of the documents on their face, not a finding about actual system use or legal compliance.

Executive conclusion

The documents show that Little Rock is generating monthly, quarterly, semiannual, and statutory ALPR-related reports, but the reporting system is not internally reconciled and the statutory report does not clearly supply all data required by Arkansas Code § 12-12-1805.

The most important findings are:

1. The six-month statutory report labels **350,211 automated hotlist alerts** as “confirmed matches,” but does not explain whether those alerts were independently verified.
2. The report does not provide an identifiable count of matches that failed to correlate after investigation, nor a count of matches that resulted in both **arrest and prosecution**. Its outcome chart instead reports 91 vendor-defined “successes,” including leads and investigations in progress.
3. **270,215 of 350,211 alerts, or 77.16%, came from custom hotlist categories**, including 46,263 alerts from non-owned custom hotlists on shared networks. The report does not identify the actual names, owners, legal predicates, or lifecycle rules for those lists.
4. Two reports for the same January-June period disagree: the RTCC semiannual dashboard reports 90 successes, 86 cases cleared, \$807,772 recovered, and 53 stolen vehicles; the statutory report reports 91, 86, \$856,299, and 54 respectively.
5. The April-June monthly dashboards do not reconcile with the Q2 dashboard. The difference in recovered-property value is exactly **\$48,527**, the same amount separating the semiannual and statutory reports.
6. The one-page Q2 audit reaches a blanket finding of full compliance but does not disclose its population, sample size, number of queries, user count, methodology, exceptions, or supporting workpapers. Its described focus was search reasons, not the full range of controls addressed by G.O. 325.

7. The supplied version of G.O. 325 took effect July 8, 2026, five days after the July 3 audit. The prior July 14, 2025 version is needed to determine the exact rules applicable during Q2 and on the audit date.
8. The production contains unredacted and redacted versions of the April and May reports. If both were released in the same records production, information obscured under § 25-19-105(b)(2) in one copy remained visible in the other, making the redaction ineffective as a records-handling measure.

Document inventory

Document	Date / period	Pages	Role
March RTCC monthly report	March 2026; memo dated April 6	3	Monthly operations and LPR dashboard
April RTCC monthly report, unredacted and redacted versions	April 2026; memo dated May 4	3 each	Monthly operations and LPR dashboard
May RTCC monthly report, unredacted and redacted versions	May 2026; memo dated June 3	3 each	Monthly operations and LPR dashboard
RTCC Units June Monthly and Quarterly Report	June and Q2 2026; dated July 2-3	7	June and Q2 operational/LPR dashboards
RTCC Semi-Annual June Report	January-June 2026; dated July 3	4	RTCC-wide semiannual dashboard
Six-Month Practice and Usage Data Report	January 1-June 30, 2026	3	Purports to satisfy Ark. Code § 12-12-1805
LPR 2026 Q2 Audit Report	Audit dated July 3, 2026	1	Quarterly search-reason audit
LRPD General Order 325	Effective July 8, 2026	4	Current supplied LPR policy; replaces July 14, 2025 version

Statutory six-month report

Reported volume

Metric	Reported value
Plates scanned	103,375,512
Total hotlist alerts, labeled "confirmed matches"	350,211
Official hotlist alerts	79,996
LRPD custom hotlist alerts	223,952
Non-owned custom hotlist alerts on LRPD networks	46,263
Total custom-source alerts	270,215
Vendor-defined successes	91
Cases cleared	86
Cleared by arrest	74
Cleared by other means	12
Leads generated	4
Investigations in progress	1

Metric	Reported value
Recovered-property value	\$856,299
Stolen vehicles recovered	54

The report equates “Total Number of Confirmed Matches (Alerts)” with 350,211 “Total Hotlist Alerts.” A system alert is not necessarily a human-confirmed match. G.O. 325 itself distinguishes a system “hit” from later visual and, if practical, ACIC verification. The report does not define the verification step used to convert raw alerts into “confirmed matches.”

Hotlist mix

- Custom and non-owned custom sources generated **270,215 alerts**, or **77.16%** of all reported alerts.
- Official sources generated **79,996 alerts**, or **22.84%**.
- The report’s topic totals mathematically equal 350,211, but entries such as “Custom Hotlist Alert” and “Non Owned Custom Hotlist Alert” are categories, not the actual names of the lists.
- The report therefore does not allow a member of the public to determine which agency or user created each custom list, what offense or investigation supported it, how long it remained active, or whether it was removed when the legal basis expired.

Outcome categories do not match the statute

Arkansas Code § 12-12-1805 requires, for each check against a list:

1. the number of confirmed matches;
2. the number of matches that did not correlate to an alert after further investigation; and
3. the number of matches that resulted in arrest and prosecution.

The report’s narrative claims that Figure 2 reflects those categories, but the graphic actually reports:

- 74 cleared by arrest;
- 12 cleared by other means;
- 4 leads generated; and
- 1 investigation in progress.

It contains no identifiable false-alert/non-correlation count and no prosecution count. “Cleared by arrest” is not the same as “resulted in arrest and prosecution,” and leads or investigations in progress do not satisfy either statutory outcome category. On the face of the document, the report is therefore incomplete or at least too ambiguous to demonstrate compliance with § 12-12-1805(b)(3).

Scale ratios

These are descriptive ratios, not measures of constitutionality or program value:

- 350,211 alerts equal **0.3388%** of the 103,375,512 scans.
- The system averaged approximately **571,135 scans** and **1,935 alerts per day** over the 181-day reporting period.
- The 91 vendor-defined successes equal approximately **one success per 3,848 alerts** or **one per 1.136 million scans**.
- Because “success” includes arrests, leads, warrants, or stops, it should not be represented as an arrest, prosecution, conviction, or crime-prevention rate.

Reconciliation problems

Same six-month period, different totals

Metric	RTCC semiannual report	Statutory six-month report	Difference
Total successes	90	91	+1
Cases cleared	86	86	0
Recovered-property value	\$807,772	\$856,299	+\$48,527
Stolen vehicles recovered	53	54	+1

The reports do not supply extraction timestamps, revision histories, or an explanation for the changes. A later data entry or reclassification could explain them, but the documents do not establish that. The vendor audit trail for outcome changes is needed.

Q2 dashboard does not equal the sum of April-June dashboards

Metric	April	May	June	Monthly sum	Q2 dashboard	Q2 minus monthly sum
Successes	11	19	16	46	47	+1
Cases cleared	10	19	15	44	45	+1
Recovered-property value	\$88,297	\$174,502	\$145,100	\$407,899	\$359,372	-\$48,527
Stolen vehicles recovered	6	13	10	29	28	-1

The exact \$48,527 discrepancy is notable because the statutory six-month report exceeds the RTCC semiannual report by the same amount. This suggests that a success record or property value may have been added, removed, or reclassified between exports, but that is an inference—not something the reports explain.

Operational totals use inconsistent inclusion rules

The semiannual operational table lists monthly totals of 547, 613, 605, 618, 701, and 670. Those figures sum to 3,754, while the table’s grand total is 3,964, a difference of 210.

The 210-point difference equals the February and March arrest, misdemeanor-charge, felony-charge, and recovered-firearm subtotals. In other words, the February and March monthly totals exclude those outcome rows, while the January and April-June totals include them. The Q1/Q2 grand totals then include all rows. This makes the monthly “TOTAL” row and some month-to-month percentage comparisons internally inconsistent.

Q2 audit assessment

The July 3 audit memorandum states that a quarterly audit was conducted and that its primary focus was whether users documented reasons for searches during the prior three months. It concludes that all Department Flock users were in full compliance.

The public audit memorandum does **not** state:

- the number of users reviewed;

- the number of searches in the audit population;
- whether every search or a sample was examined;
- the sampling method;
- the exact start and end dates;
- the number of missing, vague, or corrected reasons;
- whether case/CAD numbers supported the reasons;
- whether custom hotlists had documented legal predicates and removal dates;
- whether searches were tied to permissible criminal-justice purposes;
- whether downloads, sharing, user access, retention, and deletion were tested;
- whether alerts leading to stops were independently verified; or
- what records support the “full compliance” conclusion.

The supplied G.O. 325 says a quarterly audit should test compliance with all related policy, procedure, and state laws. The audit memorandum documents a narrower search-reason review. It may be a summary of a broader review, but the supplied document alone cannot establish that.

Timing problem

The audit is dated July 3, 2026. The supplied G.O. 325 is dated July 8, 2026 and replaces a July 14, 2025 order. The prior order—not the new one—was presumptively the operative written policy during Q2 and on the audit date. A reliable compliance evaluation therefore requires the replaced July 14, 2025 version and any interim directives.

Redaction and production issues

The April and May records were supplied in both unredacted and redacted forms. The redacted copies obscure limited employee leave/medical-status language under § 25-19-105(b)(2), while the corresponding unredacted copies display it.

If both versions were released in the same FOIA production, the duplicate unredacted copies defeated the redactions. This does not show that the underlying operational or LPR data is false, but it is a document-control and privacy concern. The analysis should avoid republishing the personnel information.

The redacted PDFs are also flattened image documents, while the unredacted April and May files retain searchable text. Flattening is common in redaction workflows, but it makes the public copies less accessible and harder to audit electronically.

Additional report-quality errors

- The March report says registered cameras changed from 2,830 to 2,832 but labels the change “+36”; the arithmetic change is +2.
- The March narrative says integrated cameras both decreased and increased.
- The May narrative describes a decrease in registered cameras even though its figures show a nine-camera increase; the decrease occurred in integrated cameras.
- The June narrative says registered cameras increased by 14 “during the month,” while its monthly figures show 2,844 to 2,846, a two-camera increase. Fourteen is the Q2 change from 2,832 to 2,846.
- The statutory report jumps from Section IV to Section VII.
- G.O. 325 calls the required report “monthly biannual,” an internally contradictory phrase, before identifying January-June and July-December periods.

These errors are individually minor, but together with the unreconciled dashboards they show a need for a defined reporting dictionary, extraction timestamp, revision control, and supervisory reconciliation before publication.

Focused follow-up records to request

1. The July 14, 2025 version of G.O. 325 and every revision or interim directive effective during January-June 2026.
2. The native or system-exported January-June 2026 statutory dataset, including every field used to produce Figures 1 and 2.
3. The definition and calculation logic for “alert,” “confirmed match,” “success,” “case cleared,” “cleared by arrest,” “lead generated,” and “arrest and prosecution.”
4. The count of matches that did not correlate to an alert after investigation.
5. The count of matches that resulted in both arrest and prosecution, with the counting methodology.
6. The actual names, owners, creation dates, legal predicates, case/CAD numbers, expiration dates, and removal dates for all custom and non-owned custom hotlists active during the period.
7. Export timestamps and revision histories for the monthly, Q2, semiannual, and statutory dashboards.
8. The outcome-edit audit trail explaining the differences of one success, \$48,527, and one recovered vehicle.
9. All Q2 audit workpapers: query population, sampled queries, user list, search reasons, exceptions, corrections, reviewer notes, and final approval.
10. Records showing whether the Q2 audit tested downloads, sharing, hotlists, user access, retention/deletion, and alert verification.
11. January and February monthly RTCC reports, to complete the month-by-month chain.
12. A corrected or reconciled six-month report if LRPD has issued one.

Bottom line

The documents establish high system volume and some documented enforcement outcomes, but they do not yet provide a clean statutory accounting. The central problem is not that the reported figures necessarily prove misuse. It is that the public cannot reproduce or reconcile the figures, distinguish raw alerts from verified matches, identify the custom lists producing most alerts, or locate the two outcome categories Arkansas law expressly requires.

Before these records are used to claim either program success or statutory compliance, Little Rock should provide the underlying definitions, audit workpapers, list-level detail, export timestamps, and a reconciled six-month report.

Authority and documents reviewed

- [Arkansas Act 668 of 2025](#), amending Arkansas Code §§ 12-12-1803 through 12-12-1805.
